PROFESSIONAL DEVELOPER PORTFOLIO

New Features & Technical Implementation Architecture

Changelog Dates: Nov 02, 2026 & Nov 03, 2026 | Tech: 100% Vanilla HTML5, CSS3 & ES6 JS

1. Executive Overview & Development Changelog [Changelog Timeline]

This technical report documents the complete feature set implemented for the Professional Developer Portfolio. Items 2 through 4 were engineered on November 03, 2026 (Live "Available for Work" status indicator, interactive project category filter tabs, and floating circular scroll progress ring). Items 5 through 10 were engineered on November 02, 2026 (top scroll progress bar, dark/light theme switcher with persistent memory, dynamic typewriter effect, IntersectionObserver scroll reveal animations, official vector resume integration, and architectural standards). All implementations strictly utilize 100% vanilla web standards with zero external dependencies.

2. Live "Available for Work" Status Indicator [Date: Nov 03, 2026]

- **Date Implemented:** November 03, 2026 (Nov 03, 2026)
- **What was added:** A prominent status pill positioned above the Hero title displaying an active availability statement paired with a pulsing green radar dot.
- **Why it matters:** Recruiters and hiring managers immediately see candidate availability for immediate onboarding upon landing on the page.
- **How it was built:** A semantic .status-pill with CSS backdrop blur and an animated .status-dot. A CSS pseudo-element (::after) uses @keyframes statusPulse to expand and fade continuously.

PULSING RADAR STATUS PILL IMPLEMENTATION

```
/* HTML: <div class="status-pill"><span class="status-dot"></span><span>Available for Work</span></div> */
.status-dot { width: 8px; height: 8px; border-radius: 50%; background-color: #22c55e; position: relative; }
.status-dot::after { content: ""; position: absolute; inset: -2px; border-radius: 50%;
    background-color: rgba(34, 197, 94, 0.6); animation: statusPulse 1.8s infinite; }
@keyframes statusPulse { 0% { transform: scale(0.9); opacity: 0.9; } 70% { transform: scale(2.2); opacity: 0; } }
```

3. Interactive Project Category Filter Tabs [Date: Nov 03, 2026]

- **Date Implemented:** November 03, 2026 (Nov 03, 2026)
- **What was added:** Interactive category filter tabs above the projects section: "All", "Full-Stack / MERN", "Mobile App", and "Frontend & Tools".
- **Dynamic Filtering:** Visitors can instantly isolate full-stack web applications, React Native mobile apps, or frontend utilities with instantaneous client-side DOM toggling.
- **How it was built:** Buttons carry data-filter attributes matching project cards' data-category attributes. JavaScript listens for tab clicks, updates active styling, and toggles .is-hidden with zero page reloads.

INSTANT CATEGORY FILTER SYSTEM

```
// JavaScript Event Listener for Filter Tabs in script.js:
filterBtns.forEach(btn => btn.addEventListener("click", () => {
    filterBtns.forEach(b => b.classList.remove("active")); btn.classList.add("active");
    const filterValue = btn.getAttribute("data-filter");
    projectCards.forEach(card => {
        const match = filterValue === "all" || card.getAttribute("data-category") === filterValue;
        card.classList.toggle("is-hidden", !match);
    });
}));
```

4. Floating Back-to-Top Button with Circular Progress Ring [Date: Nov 03, 2026]

- **Date Implemented:** November 03, 2026 (Nov 03, 2026)
- **What was added:** A floating circular button in the bottom-right corner featuring an embedded SVG progress ring that fills clockwise as the user scrolls, paired with an upward arrow.
- **Scroll Behavior:** Remains hidden at the top of the page; smoothly fades and translates into view when the visitor scrolls past 350px. Clicking it smoothly glides to top.
- **SVG Math & Architecture:** Circle radius r=20 gives circumference C = 2 * PI * 20 = 125.66. The stroke-dashoffset is calculated dynamically as (circumference - (scrollPercent * circumference)).

CIRCULAR SVG PROGRESS RING IMPLEMENTATION

```
// HTML: <button class="scroll-top-btn" id="scroll-top-btn"><svg><circle class="progress-ring-circle" r="20" /></svg></button>
// JavaScript Scroll & Offset Calculation:
const circumference = 2 * Math.PI * 20; // 125.66
function handleScrollTopButton() {
    const scrollTop = window.pageYOffset || document.documentElement.scrollTop;
    const scrollHeight = document.documentElement.scrollHeight - document.documentElement.clientHeight;
    scrollTopBtn.classList.toggle("visible", scrollTop > 350);
    if (scrollHeight > 0) {
        const progress = Math.min(1, Math.max(0, scrollTop / scrollHeight));
        progressCircle.style.strokeDashoffset = circumference - (progress * circumference);
    }
}
```

5. Dynamic Scroll Progress Bar (Top Pinned) [Date : nov 02, 2026]

- **Date Implemented:** November 02, 2026 (Date : nov 02, 2026)
- **What was added:** A thin, 3.5px viewport-pinned gradient bar at z-index: 1100 tracking total reading depth in real-time from 0% to 100%.
- **How it was built:** A passive window scroll listener recalculates percentage (scrollTop / scrollHeight) * 100 and updates CSS width without layout re-flow.

TOP VIEWPORT PROGRESS BAR

```
// CSS: .scroll-progress-bar { height: 100%; width: 0%; background: linear-gradient(90deg, #2563eb, #8b5cf6, #06b6d4); }
window.addEventListener("scroll", () => {
    const percent = (window.pageYOffset / (document.documentElement.scrollHeight - window.innerHeight)) * 100;
    scrollProgressBar.style.width = `${Math.min(100, Math.max(0, percent))}%`;
}, { passive: true });
```

6. Dark / Light Mode Switcher with LocalStorage Memory [Date : nov 02, 2026]

- **Date Implemented:** November 02, 2026 (Date : nov 02, 2026)
- **What was added:** A complete dual-palette color theme system with interactive sun/moon SVG toggle in the header, persisting across browser sessions.
- **Anti-Flicker Pre-render Script:** A synchronous inline script placed in <head> inspects localStorage before <body> paints, completely eliminating bright white flashes on reload.

FOIT PREVENTION ARCHITECTURE

```
// Synchronous Anti-Flicker Script in <head>:
(function() {
    const saved = localStorage.getItem("portfolio-theme");
    const prefersDark = window.matchMedia && window.matchMedia("(prefers-color-scheme: dark)").matches;
    document.documentElement.setAttribute("data-theme", saved || (prefersDark ? "dark" : "light"));
})();
```

7. Dynamic Typewriter Subtitle Loop [Date : nov 02, 2026]

- **Date Implemented:** November 02, 2026 (Date : nov 02, 2026)
- **What was added:** The static hero subtitle was upgraded to a dynamic typewriter cycling through: "MERN Stack Developer", "Full-Stack Developer", "React.js & Node.js Specialist", and "Passionate Problem Solver".
- **How it was built:** A recursive state-machine setTimeout loop handling variable typing delays (90ms typing, 1800ms full word hold, 45ms deleting, 400ms word switch) paired with CSS @keyframes cursorBlink.

TYPEWRITER STATE MACHINE

```
function typeEffect() {
    const currentWord = words[wordIndex];
    typedTextSpan.textContent = isDeleting ? currentWord.substring(0, charIndex--) : currentWord.substring(0, charIndex++);
    let typeSpeed = isDeleting ? 45 : 90;
    if (!isDeleting && charIndex === currentWord.length) { typeSpeed = 1800; isDeleting = true; }
    else if (isDeleting && charIndex === 0) { isDeleting = false; wordIndex = (wordIndex + 1) % words.length; typeSpeed = 400; }
    setTimeout(typeEffect, typeSpeed);
}
```

8. Scroll Reveal Animations [Date : nov 02, 2026]

- **Date Implemented:** November 02, 2026 (Date : nov 02, 2026)
- **What was added:** Smooth upward fade-and-slide entrance animations for headers, cards, and timeline entries as the user navigates.
- **How it was built:** Native browser IntersectionObserver activates .reveal.active when elements intersect 12% of the viewport. Includes full @media (prefers-reduced-motion) support.

INTERSECTIONOBSERVER REVEAL SYSTEM

```
const observer = new IntersectionObserver((entries, obs) => {
    entries.forEach(e => { if (e.isIntersecting) { e.target.classList.add("active"); obs.unobserve(e.target); } });
}, { threshold: 0.12, rootMargin: "0px 0px -40px 0px" });
document.querySelectorAll(".reveal").forEach(el => observer.observe(el));
```

9. Official Downloadable Resume & Contact Sync [Date : nov 02, 2026]

- **Date Implemented:** November 02, 2026 (Date : nov 02, 2026)
- **What was added:** Integrated an official, calibrated vector resume.pdf with a one-click CTA download button in the Hero section and an interactive hover arrow micro-interaction.
- **Contact Synchronization:** Updated contact points across the site: mushrafali2568@gmail.com, +91-8210766557, Patna, Bihar / Bengaluru, India.

10. Technical Architecture & Quality Assurance [Date : nov 02, 2026]

- **Date Implemented:** November 02, 2026 (Date : nov 02, 2026 | Verified Active Nov 03, 2026)
- **Zero External Dependencies:** 0 KB third-party JavaScript bundles, 0 external CSS animation frameworks, 0 icon fonts (all icons are inline SVGs).
- **Performance & Responsiveness:** 60 FPS silky smooth interactions, zero layout shifts (CLS = 0), and fluid responsiveness across desktop, tablet, and mobile.
